

Q-FOG

2015-06-01

Options

Due to the open design of the system a large number of options are available for the **Q1**. Additionally, the **Q1** can be connected to existing alarm systems from most producers. A detector and a control panel are included in the basic configuration, but if circumstances call for other solutions the possibilities are practically endless. Examples of options for the **Q1**:

Alarms

- Audible
- Visual

External communication

- GSM
- Phone caller
- WLAN

Detectors

- Adapted for special circumstances
- Wireless detectors

Extra nozzles

- Protection of adjacent room. Valves and extra hoses/pipes are needed.

Colour fitted covers

Other options are available on demand. Almost anything goes, as long as the additional equipment does not interfere with the main purpose of the unit - to suppress fires.
